

## Mulch Coverage

Determine the number of square feet to be mulched.

For a depth of 2" thick, divide the square footage by 6

For a depth of 3" thick, divide the square footage by 4

For a depth of 4" thick, divide the square footage by 3

Then divide that number by 27 in order to arrive at the number of cubic yards needed to cover your square foot area. ( because there are 27 cubic feet in a cubic yard)

Example: 500 sq. feet of area to be covered with a 3" layer of mulch

500 divided by 4 = 125

125 divided by 27 = 4.63 cubic yards (rounded off to 5 yards)

### One Yard Covers

At a depth of ½ " ..... 550 square feet

At a depth of 1" ..... 275 square feet

At a depth of 2" ..... 130 square feet

At a depth of 3" ..... 70 square feet

At a depth of 6" ..... 45 square feet

At a depth of 12" ..... 20 square feet
